PROJECT 3 · FINAL PRESENTATION

Editorial Research Agent

An author or topic → a verified book dossier for an independent bookshop

Jaime Garate Marquerie · Built with LangGraph

WHY · THE PROBLEM

The problem, and who has it

Hours spent researching are hours not spent recommending books to readers.

01

WHO

Independent bookshop owner

E.g. the founder of La Insumisa, a new bookshop in Moscardó, Madrid (my own project).

02

WHAT THEY DO TODAY

Researches books by hand

Publisher sites, catalogues and reviews; checking editions and ISBNs one by one.

THE PAIN

~4 hours

per dossier (estimate)

About 13 hours a month at 4 dossiers (estimate, to be measured).

HOW · THE DATA FLOW

How it works

A request and the bookshop's profile go in → a verified, sourced book dossier comes out

If the first search isn't good enough, the agent rewrites it and tries once more, on its own.

Made with GAMMA

HOW · LIVE DEMO

See it work.

Backup: a saved dossier and a screen recording, in case an API fails.

“Leila Guerriero”

→ a dossier of verified books for La Insumisa

01 **Start it**

Launched at the start

02 **Show it run**

Searches, checks, judges shop fit

03 **Open report**

Verified books, synopsis, genre

04 **Prove it**

Click live source links

Made with GAMMA

SO WHAT · THE RESULT

What the user gets

01 3–9 minutes

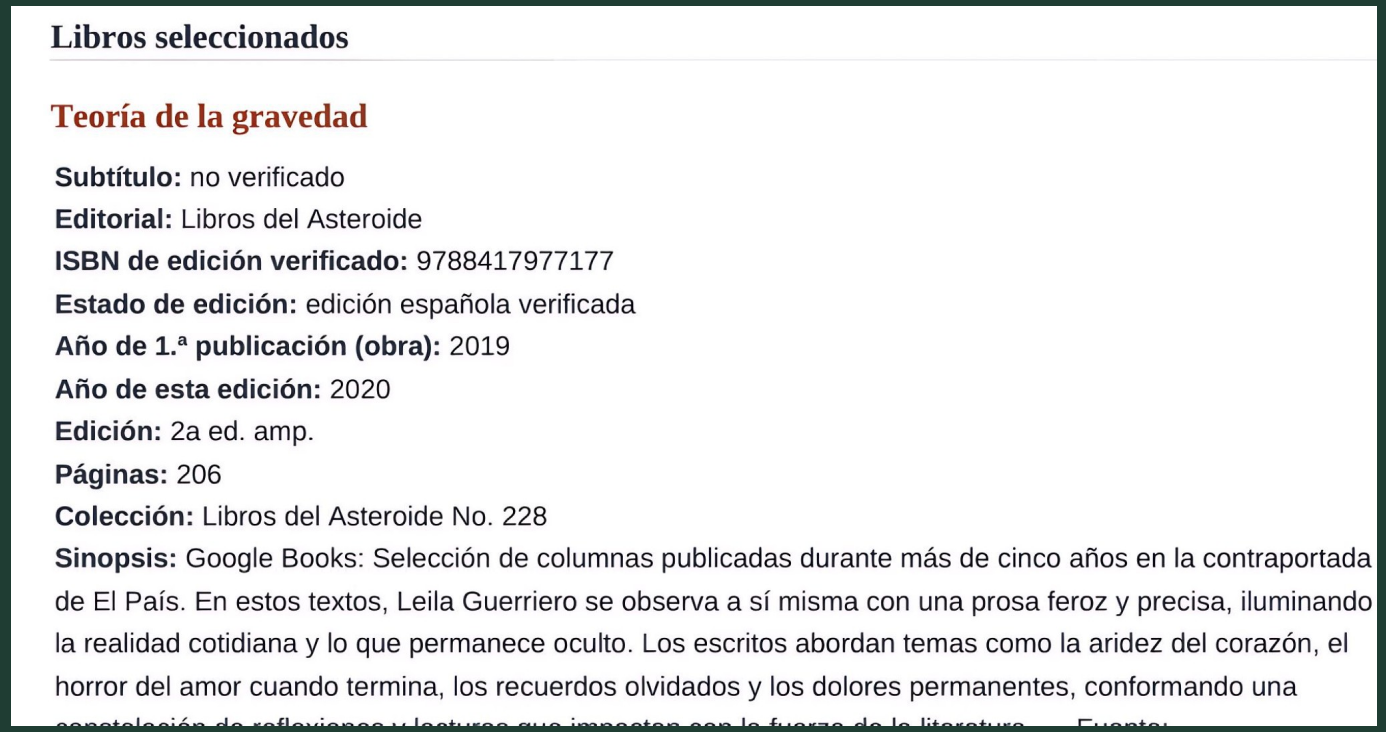

instead of ~4 hours by hand (estimate), plus human review

02 Sources

Every book links to Open Library, Google Books or the publisher

03 Honest

Marks “not verified” or “NOT FINAL” instead of guessing

Libros seleccionados

Teoría de la gravedad

Subtítulo: no verificado
Editorial: Libros del Asteroide
ISBN de edición verificado: 9788417977177
Estado de edición: edición española verificada
Año de 1.ª publicación (obra): 2019
Año de esta edición: 2020
Edición: 2a ed. amp.
Páginas: 206
Colección: Libros del Asteroide No. 228
Sinopsis: Google Books: Selección de columnas publicadas durante más de cinco años en la contraportada de El País. En estos textos, Leila Guerriero se observa a sí misma con una prosa feroz y precisa, iluminando la realidad cotidiana y lo que permanece oculto. Los escritos abordan temas como la aridez del corazón, el horror del amor cuando termina, los recuerdos olvidados y los dolores permanentes, conformando una

ARCHITECTURE · TECHNICAL SPECIFICATIONS

Under the hood

Why LangGraph: the value is in decisions and checks, so I needed explicit state and tested Python.

$0 per report

3–9 min per run

01 Orchestration · LangGraph (Python)

Runs steps, explicit state, decides to search again

02 AI model · Google Gemini (free tier)

Judges fit, drafts synopsis and genre

03 Data sources · Tavily, Open Library, Google Books

Web discovery, editions & ISBNs, cross-check

04 Grounding · Source rules, no vector database

Each field sourced, or “not verified”

05 Delivery · Markdown dossier + JSON evidence

Saved in the repo for review

06 Error handling · Retries, fallback, max 2 searches

API fails → no crash, no guessing

Made with GAMMA

NEXT · GO-TO-MARKET

What’s next: go-to-market sprints

Each sprint reaches real bookshops and has a clear success metric.

SPRINT 1	SPRINT 2	SPRINT 3
Goal & audience: Validate with La Insumisa + 2 Madrid shops	**Goal & audience: Demand + discovery: pilots + 3–5 new shops**	**Goal & audience: Paid offer for active pilot shops**
How: Visits; free 4-week pilot	**How: Referrals; booksellers' association**	**How: Direct offer to pilot users**
Deliverable: Shop profile, 4 dossiers, feedback form	**Deliverable: Request log; discovery mode: new authors and books from publishers’ new releases and literary prizes**	**Deliverable: Pricing + impact report (with permission)**
Target metric: ~4 h → ~45 min per dossier; ≥90% ISBNs right	**Target metric: % of discovered books the shop orders**	**Target metric: ≥30% of active shops pay**

Made with GAMMA

Thank you.
