PROJECT 3 · FINAL PRESENTATION

Editorial Research Agent

An author or topic → a verified book dossier for an independent bookshop

Jaime Garate Marquerie · Independent bookselling · Built with LangGraph

WHY · THE PROBLEM

The problem, and who has it

WHO

Independent bookshop owner

E.g. the founder of La Insumisa, a new bookshop in Moscardó, Madrid.

WHAT THEY DO TODAY

Researches books by hand

Publisher sites, catalogues and reviews; checking editions and ISBNs one by one.

THE PAIN

~4 hours per dossier

About 13 hours a month at 4 dossiers (estimate, to be measured).

Hours spent researching are hours not spent recommending books to readers.

HOW · THE DATA FLOW

How it works

A request and the bookshop's profile go in → a verified, sourced book dossier comes out

Step 1
Trigger
Bookseller types an author

→

Step 2
Collect
Web, 2 catalogues, publisher pages

→

Step 3
Check
Editions, ISBNs, genre checked

→

Step 4
Write
AI judges fit; facts from sources

→

Step 5
Deliver
Dossier + evidence file

If the first search isn't good enough, the agent rewrites it and tries once more, on its own.

HOW · LIVE DEMO

See it work.

“Leila Guerriero” → a dossier of verified books for La Insumisa

1
Start it
Launched at the start

2
Show it run
Searches, checks, judges fit

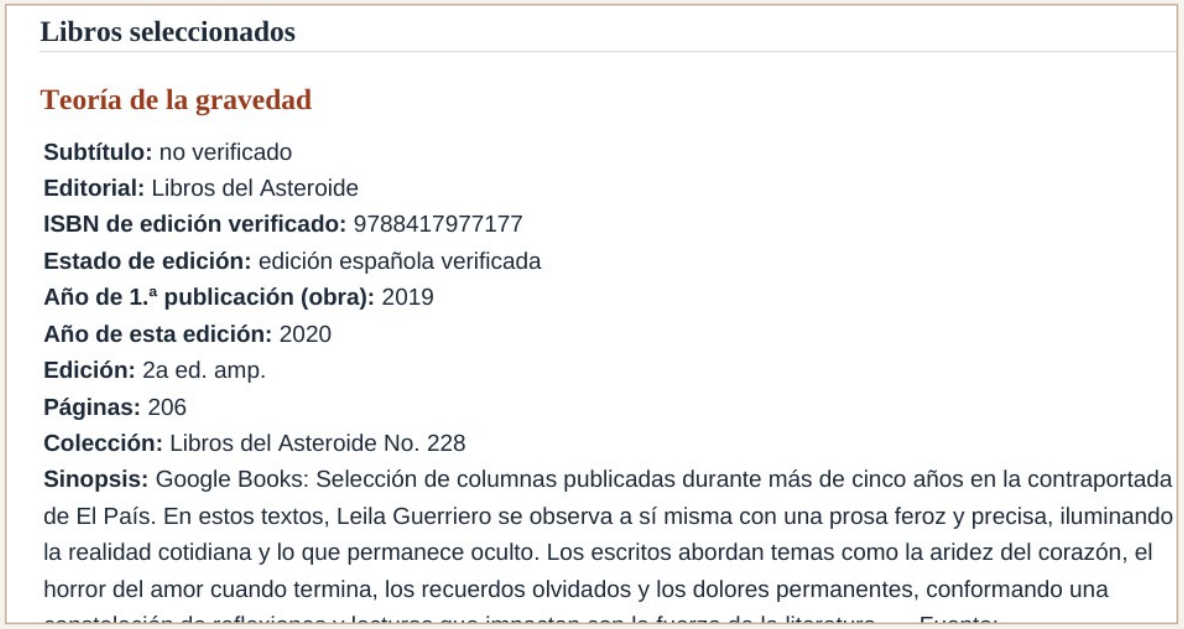

3
Open the report
Books, synopsis, genre

4
Prove it
Click a source link

Backup: a saved dossier and a screen recording, in case an API fails.

SO WHAT · THE RESULT

What the user gets

Libros seleccionados

Teoría de la gravedad

Subtítulo: no verificado
Editorial: Libros del Asteroide
ISBN de edición verificado: 9788417977177
Estado de edición: edición española verificada
Año de 1.ª publicación (obra): 2019
Año de esta edición: 2020
Edición: 2a ed. amp.
Páginas: 206
Colección: Libros del Asteroide No. 228
Sinopsis: Google Books: Selección de columnas publicadas durante más de cinco años en la contraportada de El País. En estos textos, Leila Guerriero se observa a sí misma con una prosa feroz y precisa, iluminando la realidad cotidiana y lo que permanece oculto. Los escritos abordan temas como la aridez del corazón, el horror del amor cuando termina, los recuerdos olvidados y los dolores permanentes, conformando una

3–9 minutes

instead of ~4 hours by hand (estimate), plus review

Sources

Every book links to Open Library, Google Books or the publisher

Honest

Marks “not verified” or “NOT FINAL” instead of guessing

SO WHAT · TECHNICAL SPECIFICATIONS

Under the hood

Part	What we use	Its job
Orchestration	LangGraph (Python)	Runs steps, decides to search again
AI model	Google Gemini (free tier)	Judges fit, drafts synopsis and genre
Data sources	Tavily · Open Library · Google Books	Web, editions & ISBNs, cross-check
Grounding	Source rules, no vector database	Each field sourced, or “not verified”
Delivery	Markdown dossier + JSON evidence	Saved in the repo for review
Error handling	Retries, fallback, max 2 searches	API fails → no crash, no guessing

Why LangGraph: the value is in decisions and checks, so I needed explicit state and tested Python.

COST PER REPORT **$0**

TIME PER RUN **3–9 min**

NEXT · GO-TO-MARKET

What’s next: go-to-market sprints

Sprint	Goal & audience	How we reach them	Deliverable	Success metric
1	Validate with La Insumisa + 2 Madrid shops	Visits; free 4-week pilot	Shop profile, 4 dossiers, feedback form	~4 h → ~45 min per dossier; ≥90% ISBNs right
2	Demand: pilot shops + 3–5 new ones	Referrals; booksellers' association	Request log; optional stock import	% requests with ≥2 verified books
3	Paid offer for active pilot shops	Direct offer to pilot users	Pricing + impact report (with permission)	≥30% of active shops pay

Each sprint reaches real bookshops and measures one number.

Thank you.
